

## **Video Presentation**

*A Video Presentation on Technique of Laparoscopic Resection of Non-Adrenal Retroperitoneal Tumours*  
**by Dr Aung Myint Oo**

***Purpose/Introduction:*** The laparoscopic resections of retroperitoneal tumours are technically challenging and difficult due to deep, posterior and narrow location as well as their proximity to major vessels.

***Methods:*** We present a video of 2 cases non-adrenal retroperitoneal tumours which are resected laparoscopically in Tan Tock Seng Hospital, Singapore.

***Results:*** The clear magnified view of laparoscopy and energy devices enable the precise dissection of the tumours which are located in the deep narrow posterior spaces without injuring the adjacent major vessels.

***Conclusion:*** The laparoscopic resections of retroperitoneal non-adrenal tumours are technically challenging but safe and feasible.
