CHAIRMAN’S MESSAGE

“Stroke is a major cause of death and disability in Singapore and in many other parts of the world. With the aging population, the number of people developing a stroke is set to rise. Fortunately, there are a number of effective interventions which have been proven to reduce the risk of the first stroke, as well as subsequent strokes.

To review the available scientific evidence to support best clinical practice, we have focused the 9th Singapore Stroke Conference to be aligned with Ministry of Health’s revision of Stroke Clinical Practice Guidelines. The speakers will cover many aspects of the acute interventions and secondary prevention of stroke, and its under recognized complications and effects on mood, cognition and sexuality.

We are honoured this year to also host the Annual Meeting of the Asian Chapter of the World Federation of Neurology’s Neurosonology Research Group. Attendees will have an opportunity to interact with local and international experts in these fields, in an academic and collegial environment, as well as make new friends and renew old acquaintances.

We, the Organizing Committee, are grateful to our speakers, chair-persons, advisory board and sponsors, as well as you, the audience, for all the efforts to make this event a success.”
