CONSENSUS STATEMENT ON COVID-19 VACCINATION FOR PATIENTS WITH CARDIOVASCULAR DISEASES

The Chapter of Cardiologists, College of Physicians, Academy of Medicine Singapore and the Singapore Cardiac Society support the recommendations from the Expert Panel on Covid-19 Vaccinations appointed by the Ministry of Health.

Patients with pre-existing cardiovascular diseases carry a higher risk of severe complications from COVID-19 infection.

Approved COVID-19 vaccinations are safe and efficacious in the vast majority of patients with cardiovascular diseases (including those with prior heart attacks, those on blood thinners for heart conditions, heart rhythm problems, heart failure and prior heart surgery or procedures).
