

# PHARMACOTHERAPY IN AUTISM: TODAY AND BEYOND

Autism is a neurodevelopmental disorder with social communication deficits and restricted repetitive interests and behaviours. Pharmacotherapy in autism traditionally targets comorbidities in Autism but not the core deficits in this disorder. Research in pharmacotherapy now examines the underlying neurophysiology and aims to address the social communication deficits in Autism. This talk reviews existing pharmacotherapy and discusses ongoing research in novel agents in current research on Autism.

**Dr Sung Min**

**Senior Consultant**, Department of  
Developmental Psychiatry  
**Program Director**, Neuro-Behavioural  
Clinic (Autism Services & ADHD Services)  
Institute of Mental Health, Singapore

**Tuesday, 12 Apr 2022**

**6:00PM – 7:00PM**
